sage ‘AI providers therefore have good reason to exclude AI-generated content’:

Of course, companies may not want to impose a blanket ban on AI-generated training items. There are several situations where AI-generated training items can help address issues in the dataset, such as data scarcity and bias (see e.g. de Wilde et al., 2024), and to augment data quality (for instance by removing noise, normalising, or increasing resolution). These directed uses of AI-content can be very beneficial; model collapse arises when the model’s training set is indiscriminately extended with AI-content.’ should be moved
